

**Certificat of the traitement of the lumber and planed lumber with the
impregnating agent AXIL 3000 P in immersion process**

Hereby declares

Dold Holzwerke GmbH
Talstraße 9
D – 79256 Buchenbach

that the lumber / planed lumber listed below has been treated with the impregnation agent Axil 3000P in a dipping process.

AXIL 3000P is an impregnating agent

- with the FCBA number of certificat: 502-18-2131
- Containing the active ingredients: permethrin, tebuconazole, propiconazol and IPBC

for use class 2:

- penetration class: NP1 according to EN 351-1
- surface treatment: 10 g/m²
- check marks: Iv, P

with a preventive effect against wood-destroying fungi and insects, including termites. At the same time it provides temporary protection for the treated wood from blue stain and mold.

Do not use wood in direct contact with animals, food and feed. Do not use wood over or near surface water.
